Since 1960, Stucchi is one of the leading manufacturers of quick disconnect couplings for all varieties of sizes and port configurations, ranging from 1/8" to 2" in dimensions to accommodate a wide range of application requirements.

Pressure capabilities extend to 720 bar operating pressure; port configurations include BSP, NPT, SAE and metric standard in stock; materials range from brass to 316 stainless steel; and there is also an assortment of seal options.

Its solutions-based approach meets the demanding requirements for applications across multiple markets.

Product quality assurance is documented throughout the company's supply chain, beginning with raw materials certifications, ongoing improvements in production materials, automation of production, fatigue testing, pressure-testing parts prior to shipping, and an ISO quality-management system.

Custom solutions? Ask Stucchi!

Since 1960 Stucchi has proposed customized and innovative solutions to the market. A continuous search for solutions that have generated a strong competence about the product and its many applications.

**For more information
please contact Stucchi Technical Support.**

Quick Couplings Stucchi Interchange

Select the Brand, the Series, the Part number and Stucchi Interchange will give you the equivalent Stucchi product.

Fill in the form on interchange.stucchi.it and discover the power of this tool.

Technical question? We are here to help you!

Every application is different and it may be challenging to choose the solution that will bring the most value and benefit to your equipment. That's why STUCCHI has a team of product engineers ready to help you to facilitate your work in every step of the process. **From the choice of the most suitable product to the pressure drop calculation or material compatibility check, they are here to assist you in all your design challenges.**

For more information please contact Stucchi Technical Support.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Connect under pressure products are suitable to be connected under residual (static) pressure.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

The interchangeability of quick couplings is mentioned under the assumption that the manufacturer of the considered products has not changed any dimension.

It is mandatory to carefully read and closely follow the instructions before selecting or using any Stucchi products.

Always refer to the version uploaded in the Instructions and warning section of stucchigroup.com website for the latest release.

For specific, product-related, instructions, please contact Stucchi technical service.

ISO 9001, ISO 14001, ISO 45001

After certification of occupational health and safety management system (**ISO 45001**), Stucchi reached another major objective of the company policies through a careful performance of the service for the full compliance with national and international environmental management systems, certifying its model of business organization according to the **UNI EN ISO 14001:2004**.

ISO 9001

ISO 45001

Certifications available on request

The strength that distinguishes Stucchi in the market is a “constant flow of solutions” in the development, manufacturing and distribution of products for fluid connections.

The vision that drives us towards the future is to be recognized by our customers as the supplier of choice for fluid power products and solutions that are easy to use, safe, durable, environmentally friendly and that help in saving energy. Following these principles Stucchi offers solutions that cover a wide range of applications constantly ensuring the quality of products.

Stucchi couplings are suitable for machines and systems related with controlling mobile equipment used in off-highway applications.

In exploration, extraction, field services (upstream), storage and conveyance (downstream) of crude oil and natural gas Stucchi products are the best solutions.

Vehicle manufacturers appreciate Stucchi couplings for their high performances in hydraulic applications systems to connect different tools or trailers.

From conventional ‘poppet design’ profile to flat face and multicouplings, Stucchi products are present on agricultural machines and attachments.

Stucchi couplings are present on machineries and systems used for industrial manufacturing.

Machineries and systems related to various hydraulic equipment (machine and automation tools, powered hand tools) require high performance couplings and Stucchi can provide them.

Stucchi couplings are present on systems associated with high pressure applications; not only on jacks, ram or clamping devices but also on rescue equipment.

Stucchi quick couplings are equipped on systems associated with vehicles refrigeration (A/C recharge) and isothermal bodies through low temperature eutectic plates.

Machineries for cooling of systems with water or water glycol can be equipped with Stucchi quick couplings.

Stucchi couplings are used in chemical applications where flow performances associated with non-spill design allows to increase system specifications and to protect the environment.

Manual multicouplings are tools that allow the connection and disconnection of several hydraulic power lines, electrical and pneumatic or cooling lines simultaneously.

The connection and disconnection operation requires a simple and quick movement allowing the operator to save time and operate safely.

The multicouplings are equipped with flat face couplings that are designed to reduce contamination entering into a circuit, eliminate spillage, and reduce air inclusion during connection and disconnection of the couplings.

**Stucchi offers a wide range of multicouplings to satisfy the diverse applications requirements.
All the lines can have the same nominal diameter or each line can be different from the others according to the application.**

BENEFITS

- Flexibility, large range of configuration to fulfill different Customer request
- Flat face couplings to reduce contamination of circuits
- Connects with residual pressure
- Mechanical connection eliminates brinelling effect
- Safety lock prevents unwanted disconnection
- Simple to use with a single movement applied by one arm only
- Ease of maintenance or replacement of quick couplings
- Cap and parking station available
- Possible to integrate hydraulic lines along with pneumatic, water cooling or electrical connector in the same multiconnection
- Minimize time to change different attachments
- Eliminate the risk to mismatch the hydraulic connections
- Reduce the assembly space necessary for hydraulic connections
- Easily mounted on new equipment or retrofit on pre-existing system
- Possibility to integrate heater, sensor, indexator key or other devices

Hydraulic oil power line

Operating pressure up to
350 bar - 5000 PSI

Connection / Disconnection
under residual pressure

DP/GR

Features

- UP to 10 lines
- Plates in brass or aluminum
- Couplings in carbon steel
- FAQ series: coupling for water/glycol
- Optional: electrical connector, sensors...

Page **14**

Water/Glycol - Air/Oil

Operating pressure up to
10 bar - 145 PSI

Connection/Disconnection
without residual pressure

GRE

Features

- UP to 18 lines
- Plates in anodized aluminum
- Couplings in brass
- Designed to be used for hydraulic oil-water/cooling-pneumatic application

Where Multicoupling?

Agriculture

Oil&Gas

Industry

High Pressure

Cooling

Refrigeration

Earth Moving

Vehicles

Hydraulic Equipment

Chemical & Food Industry

Flat face

Flat face is easy to clean, helping to reduce the inclusion of contamination in the hydraulic circuit

+ Male & female couplings

Equipped with a patented special valve to connect & disconnect the hydraulic lines. Special couplings available for water cooling or pneumatic lines. The main purpose of the couplings is to convey fluid, hydraulic signals or energy thru the lines and automatically shut off without spillage during disconnection.

Electrical connector

Electrical connector option
Possible to integrate an electrical connector with hydraulic couplings in the same multiconnection. It is a good complement to Stucchi multiconnection adding the possibility to conduct low voltage signal for solenoid valve, sensor or other electronic Customer devices.

Fixed plate

It is called "fixed" because is normally installed on the machine, thanks to the bolting holes to assemble the body on the frame of the Customer equipment. Fixed multiconnection is normally supplied with male couplings installed

Mobile plate

It is called "mobile" because is normally installed on the attachment (it is the part with the locking pins). The couplings of the mobile parts are connected to the flexible hose bundle of the attachment, so the mobile part of the Customer equipment.

Cover for fixed multiconnection

Reinforced design made in Aluminum in order to resist to weather conditions. It helps to prevent dirt, pollutants & contamination entering the couplings of fixed multiconnection in disconnected position.

Male residual pressure eliminator

Patented internal pressure release valve system allows an easy connection with high internal residual pressure

Parking station

To protect the mobile half when disconnected. It helps to prevent dirt, pollutants & contamination entering the couplings of mobile multiconnection in disconnected position. In addition to that, it helps to fix the mobile half with his hose bundle when not in use, thanks to the fixing holes making possible to assemble the parking station on the attachment frame

Levers & Locking

Ergonomic lever for easy connection/disconnection with Safety lock system avoids accidental disconnection

* Electrical Connector instead of hydraulic line

** this line is only dedicated for EC

FAP9 "A" and "D": the version is depending on the type of multicoupling in use.

Step A

Define the type of multicoupling you need

Step B

Choose configuration of the multicoupling

Step C

Set up each line

A. DEFINE THE TYPE OF MULTICOUPLING YOU NEED

DP

Features

- Hydraulic oil power line
- Operating pressure up to 350 bar
- Dis/connection under pressure
- Up to 6 lines
- Body in aluminium with special treatment
- Locking on the side

GR

Features

- Hydraulic oil power line
- Operating pressure up to 350 bar
- Dis/connection under pressure
- Up to 10 lines
- Body in brass with nickel plating
- Locking on the lever

B. CHOOSE CONFIGURATION OF THE MULTICOUPLING

1 Dimension your couplings and EC

Coupling size choice is based on:

- Flow/Pressure drop
- Operating pressure
(check on the FAP-ZN, FAP-HP or FAQ serie datasheet)
- Hose/Port size

2 Define your configuration = List your couplings & EC

Eg: 2 x size 3/8" + 1 x size 1/2" + 1 EC

3 Choose the multicoupling for your configuration

Use the overview table 'Multi Description' to choose the multicoupling for your listing/configuration

Advice:

1. You can increase the size of some couplings to have a better match with an existing configuration.
2. In case of too many lines, you may need to divide your configuration in different plates.

4 Verify the resistance of your multicoupling

Use 'Max. Multicoupling Resistance' provided on the single datasheet to be sure that the multicoupling will be able to handle the pressure once connected.

See page 27 for details.

C. SETUP EACH LINE

Hydraulic oil

Connectable under pressure

Medium pressure

FAP-ZN*

Hydraulic oil

Connectable under pressure

High pressure

FAP-HP

Water-Glycol

Not connectable under pressure

Low pressure

FAQ

Choose your port type (BSP/SAE-ORB/NPT...) and port size

* if size 3/8" check the multicoupling to know if you need a type A or D
(See Multi Map pag. 16)

Technical features and options

Interchange

Stucchi internal specification

Available threads

BSP NPT SAE

Mechanical connection

Internal cams and locking pins

Valving style

Flat Face

Connection/disconnection system

Rotating the lever after disengage the locking system

Operating pressure

Up to 350 bar/5000 psi

Construction material and surface treatment

Body plates in aluminum alloy with hard oxidation surface treatment for DP; Body plates in brass with nichel plating for GR; lever in carbon steel with zinc nickel plating.

Flow rate

Up to 378 l/min - 100 GPM

Nominal diameter available

FAP9=3/8", FAP13=1/2", FAP15=5/8", FAP17=3/4", FAP21=1"

Temperature

from -20 °C to +100 °C
(from -4 °F to +212 °F).

Connection under pressure

Connectable with residual pressure in both sides with FAP-ZN couplings

Application

Agriculture

Oil&Gas

Industry

High Pressure

Cooling

Refrigeration

Vehicles

Hydraulic Equipment

Chemical & Food Industry

Benefits

- Optimal solution for hydraulic fluid power applications with a operating pressure up to 350 bar.
- Quick connection and disconnection of up to ten hydraulic, electrical and pneumatic lines without any risk to incorrect connection of the lines.
- Ergonomic lever for easy connect/disconnect with residual pressure.
- Patented coupling design to connect/disconnect multiple couplings with high residual pressure.
- Flat face couplers eliminate environmental issue of leakage.
- No risk of misalignment or misconnection with guide pin design.
- Couplers mounted with snap rings for ease of installation or replacement.
- Fixed half male couplers interchangeable with FIRG or A series flat face coupling for temporary diagnostic purpose.
- Electrical connector option for electronic control systems.
- Easily mounted on new equipment or retrofit on pre-existing system.

Installation

- Ensure the space to assemble the multiconnection is enough to allow the correct connection & disconnection in an ergonomic way. Check the drawing of the multiconnection referring to the corresponding datasheet.
 - For GR version: If the fixed multiconnection has the couplings assembled in the holes: disassemble the couplings close to the fixing holes prior to proceed with the installation.
 - Attach the fixed multicoupling on the machine using fixing screws as indicated in the drawing below.
 - After having assembled the couplings on the hoses, place the couplings in the holes of the multicoupling and lock them using proper threaded sleeve and/or seeger/snap rings.
- Please refer to corresponding FAP-ZN or FAQ coupling series datasheet for further information.
- Use flexible hoses to connect the couplings; avoid to using rigid pipes as they could transmit excessive side load & vibration to the multiconnection.

DP

GR

To install the parking station

Ensure the space to assemble the parking station is enough to allow the correct connection & disconnection in an ergonomic way.
Check the drawing of the parking station.

Fix the parking station body on the machine or the frame of the attachment using fixing screws as indicated in the drawing of the corresponding parking station.

Please verify the parking station is placed "face up".

DP

GR

FAP-ZN: How to install

- FAP-ZN couplings are normally supplied already assembled on the Stucchi multiconnection or may be supplied as a spare part to be replaced on a Stucchi multiconnection.
- To assemble the FAP-ZN couplings on the multiconnection: take away the seeger ring, unscrew the threaded nut, mount the flexible hose on the threaded port (screwing with the proper torque), insert the coupling in the hole of the multiconnection; screw the threaded nut with a manual torque (an overtorque is not necessary!) then assemble the seeger ring to lock the threaded nut (fig. below 1...6) .
- To disassemble the FAP-ZN couplings from the multiconnection: take away the seeger ring, unscrew the threaded nut, extract the coupling from the hole of the multiconnection (fig. below viceversa 6 to 4) then proceed to disassemble the flexible hose from the threaded port.
- Before connecting clean the flat mating surface of coupling to avoid inclusion of contamination in the circuit.
- Connect and disconnect in according to the instruction of use for multicoupling.
- Test the correct functioning of the couplings

WARNING

During the assembly/dismantling of the quick couplings, be careful to not deform the seeger rings. if deformed, replace them.

FAP-HP: How to install

- FAP-HP couplings are normally supplied already assembled in the Stucchi multiconnection or may be supplied as a spare part to be replaced on a Stucchi multiconnection.
- To assemble the FAP-HP couplings in the multiconnection: take away the seeger ring on the back side of the male & female, insert the coupling in the hole of the multiconnection then assemble the seeger ring on the back of side to lock the couplings in the plates, mount the flexible hose on the threaded port (screwing with the proper torque), (fig. below 1...2) .
- To disassemble the FAP-HP couplings from the multiconnection: take away the seeger ring from the back side of male & female then proceed to disassemble the flexible hose from the threaded port. , extract the coupling from the hole of the multiconnection (fig. below reverse process)
- Before connecting clean the flat mating surface of coupling to avoid inclusion of contamination in the circuit.
- Connect and disconnect in according to the instruction of use for multicoupling.
- Test the correct functioning of the couplings

FAQ: How to install

- FAQ couplings may be fitted in the same holes of FAP-ZN couplings; read the table on the specific multiconnection as described below:
- FAP9A: in the hole may be assembled the FAQ9A coupling
- FAP9D: in the hole may be assembled the FAQ9D coupling
- FAP13 or FAP15 or FAP17 or FAP21 : in the hole may be assembled respectively FAQ13,15,17,21 coupling.
- FAQ couplings are normally supplied already assembled on the Stucchi multiconnection or may be supplied as a spare part to be replaced on a Stucchi multiconnection.
- To assemble/disassemble the FAQ couplings on the multiconnection: take away the seeger ring from the groove, assemble the flexible hose on the threaded port, insert the coupling in the proper hole of the multiconnection; then assemble the seeger ring to lock the FAQ in the multiconnection. Follow the sequence shown in the drawing below from 1 to 4 for assembly operation; to disassemble follow the same sequence but viceversa from 4 to 1.
- Be careful during the assembly of the seeger ring: if damaged replace it with a new one.
- Before to couple clean the flat mating surface of quick coupling to avoid the inclusion of dirty in the circuit.
- Connect and disconnect in according to the instruction of use for multicoupling.

To connect

- Before coupling, clean the flat mating surface of the couplings to avoid inclusion of dirt in the circuit.
- Insert the guidance pins of the mobile multicoupling into the holes of the fixed multicoupling and move the mobile half till the contact of the couplings faces (fig. 1).
- Acting on the handle turn the lever in the direction of the fixed multicoupling (fig. 2).
- Continue to rotate till the safety lock automatically engage itself (fig. 3).
- Now the multicoupling is coupled and ready to work.
- In case of connection with residual pressure in the circuit, the maximum force is required only for the last third of the connection.

To disconnect

- Push the red safety button, at the same time acting on the handle turn the lever in the direction of the mobile multicoupling (fig. 4).
- Continue to rotate till the mechanical stop of the levers (fig. 5).
- Now the multicoupling is uncoupled and it is possible to pull out the mobile half (fig. 6).
- In case of disconnection with residual pressure in the circuit, the maximum force is required only for the first third of the disconnection.

To connect

- Before coupling, clean the flat mating surface of the couplings to avoid the inclusion of dirty in the circuit.
- Insert the guidance pins of the mobile multicoupling into the holes of the fixed multicoupling and move the mobile half till the contact of the couplings faces (fig. 1).
- Push the red safety button to unlock the rotation of the lever, and in the same time acting on the handle turn the lever in the direction of the fixed multicoupling (fig. 2).
- After a short rotation release the red button (fig.3).
- Continue to rotate till the safety lock automatically engage itself (fig. 4).
- Now the multicoupling is coupled and ready to work.
- In case of connection with residual pressure in the circuit, the maximum force is required only for the last third of the connection.

To disconnect

- Push the red safety button, at the same time acting on the handle turn the lever in the direction of the mobile multicoupling (fig. 5).
- After a short rotation release the red button (fig. 6).
- Continue to rotate till the mechanical stop of the levers (fig. 7).
- Now the multicoupling is uncoupled and it is possible to pull out the mobile half (fig. 8).
- In case of disconnection with residual pressure in the circuit, the maximum force is required only for the first third of the disconnection.

Resistance

All Stucchi multicouplings have been tested at their maximum resistance by impulse pressure test (for 200.000 cycles in according with ISO norm; 100.000 cycles for model GRHP7 7A-4EC).

The maximum resistance (N) for each multicoupling model is indicated in the data sheets.

The force applied to multicoupling coupled depends on the number of couplings under pressure at the same time, on their operating pressure and on their size. For a correct use of the multicoupling it is necessary to verify that the force is not higher than the maximum resistance of the multicoupling.

$$F = [(P3/8 \times S3/8) + (P1/2 \times S1/2) + (P5/8 \times S5/8) + (P3/4 \times S3/4) + (P1 \times S1)] \times 10$$

F = Force applied to multicoupling (N)

P = Total amount of operating pressure coupled in the couplings with same size (bar)

S = Hydrostatic pushing area coupled (cm²)

The operating pressure for a single coupling must not be higher than the maximum operating pressure coupled indicated in table.

Coupling size	Hydrostatic pushing area coupled	Maximum operating pressure coupled for FAP-ZN couplings
FAP-ZN9 - 3/8	S3/8= 1,226 cm ²	35 Mpa (350 bar)
FAP-ZN13 - 1/2	S1/2= 1,893 cm ²	33 Mpa (330 bar)
FAP-ZN15 - 5/8	S5/8= 2,404 cm ²	33 Mpa (330 bar)
FAP-ZN17 - 3/4	S3/4= 3,298 cm ²	33 Mpa (330 bar)
FAP-ZN21 - 1	S1 = 4,335 cm ²	30 Mpa (300 bar)

Example

Max. resistance of 870015092 MULTI COMPLETE GR6 2A-2C-2D is 23000 N.

To verify if 870015092 MULTI COMPLETE GR6 2A-2C-2D multicoupling resists to operating condition of following application:

One line size 3/8 with max. operating pressure coupled of 30 Mpa (300 bar)

One line size 3/8 with max. operating pressure coupled of 15 Mpa (150 bar)

One line size 5/8 with max. operating pressure coupled of 25 Mpa (250 bar)

One line size 5/8 with max. operating pressure coupled of 10 Mpa (100 bar)

One line size 3/4 with max. operating pressure coupled of 20 Mpa (200 bar)

One line size 3/4 with max. operating pressure coupled of 5 Mpa (50 bar)

It is necessary to verify that F (force applied to multicoupling) is not greater than max. multicoupling resistance:

$$P3/8 = 300 \text{ bar} + 150 \text{ bar} = 450 \text{ bar}$$

$$P5/8 = 250 \text{ bar} + 100 \text{ bar} = 350 \text{ bar}$$

$$P3/4 = 200 \text{ bar} + 50 \text{ bar} = 250 \text{ bar}$$

$$F = [(P3/8 \times S3/8) + (P5/8 \times S5/8) + (P3/4 \times S3/4)] \times 10 =$$

$$F = [(450 \times 1,226) + (350 \times 2,404) + (250 \times 3,298)] \times 10 =$$

$$F = [551.7 + 841.4 + 824.5] \times 10 = 22.176 \text{ N}$$

Being F (21732 N) lower than max. multicoupling resistance (23000 N), the 870015092 MULTI COMPLETE GR6 2A-2C-2D multicoupling is suitable for this application.

! WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Do not use the female coupling disconnected with high impulse pressure.

Do not couple-uncouple with flow and/or pressure in the circuit.

Do not couple-uncouple when the temperature inside of the circuit is higher than 80 °C (176 °F).

Check the maximum allowable operating pressure of the port in use.

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

Do not force the lever without pushing the red safety button.

Do not use extensions or other tools to ease the rotating of the lever.

Do not connect the fixed half with the mobile half if dirt or other material (tool, finger) is between them

Pay attention during the connection not to put finger or other body parts between the plates

We advise to assemble the multiconnection with the female face down in order to allow water or moisture to be drained easily.

Do not exceed single coupling performance and total multiconnection resistance of the multiconnection (please refer to dedicated datasheet)

Read&follow also the corresponding catalogue of the coupling and/or electrical connector in use in the multiconnection.

When the multicoupling is disconnected, it is suggested to use the protection cover for the fixed half and the parking station for the mobile half.

Do not modify, disassemble or damage the multiconnection, part of it or coupling/electrical connector, the lever or safety lock system.

Stucchi Multiconnection GR&DP are intended to be used for hydraulic oil applications: do not use the products for dangerous, inflammable or explosive fluids

(Example: heat transfer oil at very high temperature, steam ...).

Stucchi Multiconnection GR&DP are intended to be used for hydraulic oil applications with limitations given by NBR seal compatibility&temperature range.

Do not use GR&DP series multiconnection for very high temperature applications.

FAP-ZN SERIES

INTERCHANGE > Stucchi profile (only for Stucchi multicouplings)

Stucchi®

TECHNICAL FEATURES AND OPTIONS

Interchange Stucchi profile (only for Stucchi multicouplings)	Sealing description Nitrile NBR	Connection system By multicoupling
Available sizes from 3/8" to 1"	Material/treatment Carbon steel /Zi-Ni	Available threads BSP - NPT - SAE
Operating pressure Up to 350 bar	Locking mechanism PIN/CAM	Flow rate Up to 378 l/min
Temperature (°C) -20° / +100°	Valving style Flat face	Connection under pressure Connection: Both sides. Disconnection: allowed.

BENEFITS

- Flat face is easy to clean, helping to reduce the inclusion of contamination in the hydraulic circuit.
- Minimal fluid loss during connection/disconnection, reducing fluid loss to the environment.
- Minimal air inclusion during connection/disconnection, enhancing correct function of the circuit.
- Internal flow of valve design creates minimal pressure drop, maintaining circuit efficiency in the system.
- Patented internal pressure release valve system allows an easy connection with high internal residual pressure.
- The modular design allows for broad range of port configurations.
- Couplings without locking balls eliminate the "brinelling" effect.
- Zinc Nickel plating qualified for high corrosion resistance.
- For diagnostic purpose of a single line (example: pressure or flow check for a limited period of time), male FAP-ZN may be connected with a Stucchi "A series" flat face female coupling.
- Compact slim design.
- Safe and simple to use.

HOW TO USE

- See instructions at page 22

MAIN APPLICATIONS

PERFORMANCE

Size		Series/Size	Max. flow suggested		Hydrostatic pushing area coupled	Spillage*
Inch	mm (ISO)		l/min	GPM	Cm ²	ml

*Spillage is an indicative value of the fluid loss per couple-uncouple cycle without residual pressure.

Different possible configurations:

Other ports available upon request.

Connection and disconnection with residual pressure in both couplings is recommended for occasional operations only.

For ordinary operations it is suggested to release pressure in one side before to connect and disconnect in way that operator effort and wearing of the couplings are reduced.

Temperature range:

Standard seals NBR, PUR, POM from -20 °C to +100 °C (from -4 °F to +212 °F). Please read carefully "instruction and warning" for proper selection of the products.

Tests:

The couplings coupled have been tested at max. operating pressure for 200.000 impulses, replacing the seeger ring every 50.000 impulses, in according with ISO norm. The male uncoupled have been tested for 200.000 impulses. The female uncoupled have been tested for 100.000 impulses.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Do not use the female coupling disconnected with high impulse pressure.

Do not couple-uncouple with flow and/or pressure in the circuit.

Do not couple-uncouple when the temperature inside of the circuit is higher than 80° C (176° F).

Check the maximum allowable operating pressure of the port in use.

It is important to limit contamination in the circuit to avoid compromising the function of the internal valves.

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

FAP-ZN series is intended to be used only on Stucchi Multiconnections. Do not use the FAP-ZN coupling on a Custom-made multiconnection or other device different than a Stucchi Multiconnection.

Do not disassemble, misuse, modify or damage the products.

FAP-ZN series is intended to be used with standard hydraulic oils in fluid power application. Do not use the FAP-ZN coupling with different fluids (for example with inflammable, corrosive or dangerous fluids, gases ecc). Replace the seeger ring every 50.000 impulse cycles.

For dimension "FAP9ZN 3/8": there are two versions of FAP9ZN: "A" and "D". The version is depending on the type of multiconnection in use. Please verify if the multiconnection you are using requires FAP9ZN "A" or "D" type consulting the single datasheet in case of need of spare parts. Contact Stucchi Service for support. Do not use the male FAP-ZN groove to connect the A-series female for a continuous service with pressure impulse (this feature is intended to be used only for diagnostic purpose so that for a short&limited time).

When the couplings are disconnected, it is suggested to use the protection cap and parking station.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

FAP-HP SERIES

INTERCHANGE > Stucchi profile (only for Stucchi multicouplings)

Stucchi®

TECHNICAL FEATURES AND OPTIONS

	Interchange Stucchi profile (only for Stucchi multicouplings)		Sealing description Nitrile NBR		Connection system By multicoupling
	Available sizes 3/8"		Material/treatment Carbon steel /Cr3-QPQ		Available threads NPT
	Operating pressure Up to 720 bar		Locking mechanism PIN/CAM		Flow rate Up to 46 l/min
	Temperature (°C) -20° / +100°		Valving style Flat face		Connection under pressure Connection: Both sides. Disconnection: allowed.

BENEFITS

- Flat face is easy to clean, helping to reduce the inclusion of contamination in the hydraulic circuit.
- Minimal fluid loss during connection / disconnection, reducing fluid loss to the environment.
- Minimal air inclusion during connection / disconnection, enhancing correct function of the circuit.
- Internal flow of valve design creates minimal pressure drop, maintaining circuit efficiency in the system.
- Patented internal pressure release valve system allows an easy connection with high internal residual pressure.
- The modular design allows for broad range of port configurations.
- Couplings without locking balls eliminate the "brinelling" effect.
- For diagnostic purpose of a single line (example: pressure or flow check for a limited period of time), male FAP9HP may be connected with a Stucchi "A9HP serie" flat face female coupling.
- Compact slim design.
- Safe and simple to use.

HOW TO USE

- See instructions at page 23

MAIN APPLICATIONS

FAP-HP

3/8	FAP9HP	25	3625	25	3625	25	3625	25	3625

* Spillage is an indicative value of the fluid loss per couple-uncouple cycle without residual pressure.

Connection and disconnection with residual pressure in both couplings is recommended for occasional operations only.

For ordinary operations it is suggested to release pressure in one side before to connect and disconnect in way that operator effort and wearing of the couplings are reduced.

Temperature range:

Seals in NBR (Nitrile): from -20 °C to +100 °C (from -4 °F to +212 °F).

Tests:

The couplings have been tested at max. operating pressure for 10.000 impulses in according with ISO norm.

! WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Do not use the female coupling disconnected with high impulse pressure.

Do not couple-uncouple with flow and/or pressure in the circuit.

Do not couple-uncouple when the temperature inside of the circuit is higher than 80 °C (176 °F).

Check the maximum allowable operating pressure of the port in use.

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

When the couplings are disconnected, it is suggested to use the protection cap and parking station.

It is important to limit contamination in the circuit to avoid compromising the function of the internal valve

FAP-HP series is intended to be used only on Stucchi Multiconnections. Do not use the FAP-HP coupling on a Custom-made multiconnection or other device different than a Stucchi Multiconnection.

FAP-HP series is intended to be used with standard hydraulic oils in fluid power application. Do not use the FAP-HP coupling with different fluids (for example with inflammable, corrosive or dangerous fluids, gases ecc).

Please verify if the multiconnection you are using requires FA9HP type consulting the single multicoupling datasheet

Do not use the male FAP-ZN groove to connect the A-HP series female for a continuous service with pressure impulse (this feature is intended to be used only for diagnostic purpose for a short&limited time).

FAQSERIES

INTERCHANGE > Stucchi profile (only for Stucchi multicouplings)

Stucchi®

TECHNICAL FEATURES AND OPTIONS

	Interchange Stucchi profile (only for Stucchi multicouplings)		Sealing description Nitrile NBR		Connection system By multicoupling
	Available sizes from 3/8" to 3/4"		Material/treatment Carbon steel-Stainless steel/QPQ		Available threads BSP - NPT
	Operating pressure Up to 20 bar		Locking mechanism PIN/CAM		Flow rate Up to 200 l/min
	Temperature (°C) oil -20°/+100° water +5°/+60°		Valving style Flat face		Connection under pressure Connection: not allowed. Disconnection: not allowed.

BENEFITS

- Designed to be used with fluids like air, water or water & glycol lines.
- Flat face is easy to clean, helping to reduce the inclusion of contamination to the hydraulic circuit.
- Minimal fluid loss during connection/disconnection, reducing fluid loss to the environment.
- Minimal air inclusion during connection/disconnection, enhancing correct function of the circuit.
- Linear flow reduces internal turbulence and pressure drop, maintaining circuit efficiency in the entire system.
- Superior corrosion resistance compared to zinc plating in specific corrosive environments (example: water, water&glycol, cooling fluids).
- The modular design allows flexibility with the range of port configurations.
- Allows to conduct in the same multiconnection different fluids.
- Double oring in the male valving to improve sealing action when connected.
- For diagnostic purpose of a single line (example: pressure or flow check for a short&limited time), male FAQ may be connected with a Stucchi FIRG-Q series flat face female.
- Couplings are assembled with a seeger ring for a quicker mounting or service on the multiconnection.

HOW TO USE

- See instructions at page 24

* Spillage is an indicative value of the fluid loss per couple-uncouple cycle without residual pressure.

Different possible configurations:

Different threads available upon request.

Temperature range:

Seals in NBR (Nitrile):

- for oil, from -20° C to +100° C (from -4° F to +212° F).
- for water, from +5° C + 60° C (from +41° F to +140° F).

Upon request seals in VITON®: from -15°C to +180°C (from +5 °F to +356 °F).

Upon request EPDM (Ethylene Propylene) seals: from -40°C to +150°C

(from -40 °F to +302 °F). Please read carefully "instruction and warning" for proper selection of the products.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Do not use the female coupling disconnected with high impulse pressure.

Do not couple-uncouple with flow and/or pressure in the circuit.

Do not couple-uncouple when the temperature inside of the circuit is higher than 80 °C (176 °F).

Check the maximum allowable operating pressure of the port in use.

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

Connection and disconnection has to be done without pressure only

When the multicoupling is disconnected, it is suggested to use the protection caps&parking station.

Do not disassemble, misuse, modify or damage the products.

FAQ series is intended to be used only on Stucchi Multiconnections. Do not use the FAQ coupling on a Custom-made multiconnection or other device different than a Stucchi Multiconnection.

FAQ series has been tested&approved for use with water. FAQ series is intended to be used only with not dangerous fluids (water, water&glycol, hydraulic oil) . Do not use

FAQ couplings with dangerous, flammable or explosive fluids (steam, acids, very hot/flammable oils, gases, dangerous gases etc.). Contact Stucchi Service for support.

Do not use FAQ couplings with very hot fluids (limits given by NBR seal compatibility&temperature range – see "performance" of FAQ serie).

Do not use FAQ couplings with fluids below the freezing point to avoid damages due to ice expansion and consequential extrusion of the valving

For dimension "FAQ9 - size 3/8": there are two versions of FAQ9: "A" and "D". The version is depending the type of multiconnection are in use. Please verify if the

multiconnection you are using requires FAQ9 "A" or "D" type consulting the single datasheet in case of need of spare parts. See specific instruction.

Contact Stucchi Service for support.

When the multicoupling chosen has one or more holes where no couplings or electrical connectors are fitted, it is important to cover the holes with the proper plugs in order to avoid dirt entering the multicoupling. The plugs for multicouplings holes are made in black anodized aluminum.

Installation

- Put the plug in the corresponding hole of mobile or fixed multiconnection.
- Assemble the seeger ring with proper plyers.
- Check the correct positioning of the seeger ring after assembly.
- To disassemble: same as above but reverse process.

WARNING

Pay attention not to damage the seeger ring during the assembly
Do not leave any open hole (without plug) in the multiconnection in order to avoid dirt to enter in the parts.
Do not disassemble, misuse, modify or damage the products.

In addition to the couplings for fluid energy transmission, it is possible to fit in the multicouplings the electrical connectors for the electric energy transmission. They are suitable for all very low tension electronic (max 24 V) devices such as instrumentation, signals, solenoid valves, etc.

Upon request different number of contacts.

Installation

Stucchi electrical connectors are normally supplied already assembled on the Stucchi multicouplings or could be supplied as a spare part to be replaced on a Stucchi multicoupling.

A. If the electrical connector is assembled on a Stucchi multi coupling proceed as following instruction:

Unscrew the cable retainer from the back of the multi coupling & extract the electrical connector from the multi coupling, separating the plastic cable retainer from the metallic body of the electrical connector.

Unscrew the plastic nut from the cable retainer, then insert the cable in the plastic cable retainer, so strip the cable for a length of 30 mm and the single wires for 10 mm.

Open the electrical connector cartridge to extract the single pins.
Install the single cable wire crimping the end on the pin with the proper tool.

Assemble the cartridge with all the pins & wiring crimped.

Insert the metal body of the electrical connector at the back of the multicoupling. Insert the cable with all the group assembled on.
Allow the alignment of the groove on the cartridge with the pin in the hole of the multiconnection.

Screwing the plastic nut with the metallic body (a manual torque is enough, do not overtorque). Push the cable in direction of the connector, while screw the (cable retainer) plastic nut to lock the cable and verify if there is no space for accidental incoming of water or dirt between cable and cable retainer sealing (a manual torque is enough, do not overtorque). The cable has to adhere to the cable retainer not allowing water, dirt or moisture to enter in. The male electrical connector is provided with a plastic protection: ensure this protection is sliding correctly on the pins after assembly.

Before connecting clean the flat mating surface to avoid inclusion of contamination. Connect and disconnect in according to the instruction of use for multicoupling. Test the correct functioning of the electrical connector.

B. If the electrical connector is supplied as a spare part to be replaced on a Stucchi multi coupling

Same as above but start by opening the electrical connector separating the plastic cable retainer from the upper metal body.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects. It is **MANDATORY** to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.
Do not pull the cable assembly during the use in order to avoid damages of the electrical connector.
Do not weld the electrical connector pins, they are intended to be assembled by crimping with proper tool.
Do not use the electrical connector with high voltage or high amperage.
Do not connect or disconnect with power in the lines! Always shut off the power prior to connect&disconnect.
Do not touch with hand, finger or tools the pins. Do not shortcircuit, misuse or modify the parts.
Avoid liquids, dirt, particles or other objects touching the pins: shortcircuits may happen!
The products are intended to be used in Stucchi multiconnection only. Do not use the electrical connectors on a Custom-made multiconnection or other device different than a Stucchi Multiconnection.
Every multiconnection has to be fitted with the corresponding electrical connector. For spare parts consult the list of EC at following page and the single datasheet of the multiconnection in use. Contact Stucchi Service for support.

Levers & Locking

*Ergonomic lever for easy connection/
disconnection with Safety lock system
avoids accidental disconnection*

Mobile plate

*For GRE multiconnection family
is the part with the lever, normally
installed on the attachment.*

Parking station

*To park and protect
the mobile half
when disconnected
from the machine.*

Male & female couplings

*Equipped with special valve to connect&disconnect the hydraulic,
water or pneumatic lines. Made in brass with stainless steel springs.*

Fixed plate

*For GRE multiconnection family is the part with the pins
but without the lever, normally installed on the machine.*

The stucchi multicoupling description can help you to easily know the characteristics of a multicoupling: configuration and model, number of lines and size, presence of electrical connectors. See the example below...

New name	Family	Total Lines	CS9 (A)	CS12 (B)	Previous description	Page

Water/Glycol - Air/Oil

Operating pressure up to
10 bar - 145 PSI

Connection/Disconnection
without residual pressure

GRE

Features

- UP to 18 lines
- Plates in anodized aluminum
- Couplings in Brass

CHOOSE CONFIGURATION OF THE MULTICOUPLING

1 Dimension your CS couplings

Coupling size choice is based on:

- Flow/Pressure drop
- Operating pressure max 10 bar (check on the CS serie datasheet)
- Hose/Port size

2 Define your configuration = List your couplings (CS9 or CS12, total number of CS)

Eg: 6 x size 3/8"

3 Choose the multicoupling for your configuration

Use the overview table "Multi description" to choose the multicoupling for your listing/configuration

*Eg: 6 x size 3/8" = choose GRE6-9
(6 lines with 6 CS9=3/8 couplings)*

Advices:

1. you can increase the size of couplings to have a better match with an existing configuration.
2. In case of too many lines, you may need to divide your configuration in different plates.

Technical features and options

Interchange

Stucchi internal specification

Available threads

BSP NPT hose barb or other port available on request

Mechanical connection

Internal cams and locking pins

Valving style

Non Spill type

Connection/disconnection system

Rotating the lever & lock the safety button

Operating pressure

Up to 10 bar/145 psi

Construction material and surface treatment

Body plates in aluminum alloy - anodizing surface treatment; lever in carbon steel with CRIII zinc plating. Cams and pins in high resistance carbon steel with nitriding (QPQ) treatment.

Flow rate

Up to 90 l/min - 24 gpm

Nominal diameter available

3/8" (CS9) - 1/2" (CS12)

Temperature

- for oil, from -20° C to +100° C
(from -4° F to +212° F)
- for water, from +5° C + 60° C
(from +41° F to +140° F)

Connection under pressure

not allowed

Application

Agriculture

Oil&Gas

Industry

High Pressure

Cooling

Refrigeration

Earth Moving

Vehicles

Hydraulic Equipment

Chemical & Food Industry

Benefits

- Optimal solution for industrial application with a operating pressure up to 10 bar.
- Designed to be used for hydraulic oil-water/cooling-pneumatic application.
- Quick connection and disconnection of up to eighteen (18) hydraulic, water-cooling and pneumatic lines without any risk to incorrect connection of the lines.
- Ergonomic lever for easy connect/disconnect.
- Non spill valve design couplers reduces environmental issue of leakage.
- No risk of misalignment with guide pin design.
- Couplers mounted with snap rings for ease of installation or replacement.
- Easily mounted on new equipment or retrofit on pre-existing system.

Installation

Fix the fixed multicoupling on the machine using fixing screws as indicated in the drawing here below. The multiconnection may be installed with the coupling in vertical or horizontal position. After having assembled the couplings on the hoses, place the couplings in the holes of the multicouplings and lock them with the seeger rings. Please refer to correspondent CS coupling series datasheet for further information.

To install the parking station

To install the parking station ensure the space to assemble the parking station is enough to allow the correct connection & disconnection in an ergonomic way. Check the drawing of the parking station. Fix the parking station body on the machine or the frame of the attachment using fixing screws as indicated in the drawing of the corresponding parking station.

CS: How to install

- CS couplings are normally supplied already assembled on the Stucchi multiconnection or may be supplied as a spare part to be replaced on a Stucchi multiconnection.
- Use flexible hoses to connect the couplings; avoid to use rigid pipes as they could transmit excessive side load&vibration to the multiconnection.
- To assemble/disassemble the CS couplings on the multiconnection: take away the seeger ring from the groove, assemble the flexible hose on the end port, insert the coupling in the proper hole of the multiconnection; then assemble the seeger ring to lock the CS coupling in the multiconnection. See the sequence below 1... 4 and viceversa to disassemble.
- Be careful during the assembly of the seeger ring: if damaged replace it with a new one.
- Before to couple clean the flat mating surface of quick coupling to avoid the inclusion of dirt in the circuit.

To connect

Release the pressure in the system. Before merging the two halves of the Stucchi multicoupling, ensure that the flat mating surfaces of the couplings are clean to avoid inclusion of dirt in the circuit. Handle needs to be in the 12 o'clock starting position. Align and insert guide pins on fixed half into the mating port on the mobile half until pins are fully inserted. Engage red locking mechanism on the handle (by pushing the red button) and move handle in a downward direction.

After a short rotation release the red button;
Continue to rotate till the safety lock automatically engages itself in the final position.
Now the multicoupling is coupled and ready to work.

To disconnect

Release the pressure in the system. To disconnect reverse process: engage the locking mechanism (by pushing red button) and raise handle in upward direction. After short rotation release the red button.

Continue to rotate till the safety lock automatically engage itself in the 12 o'clock position. Pull out mobile half from fixed half pins. (Pay attention during the pulling phase not to make the mobile half fall down causing injury).

Now the multicoupling is uncoupled.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.
 Never connect or disconnect with dynamic pressure (e.g. pump on).
 Do not use the female coupling disconnected with high impulse pressure.
 Do not couple-uncouple with flow and/or pressure in the circuit.
 Do not couple-uncouple when the temperature inside of the circuit is higher than 80 °C (176 °F).
 Check the maximum allowable operating pressure of the port in use.
 Make sure that the medium used is compatible with seal and material as indicated for each series.
 In case of doubt please contact Stucchi Technical Support.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

Do not force the lever without pushing the red safety button.
 Do not use extensions or other tools to ease the rotating of the lever.
 Do not connect the fixed half with the mobile half if dirt or other material (tool, finger) is between them.
 Do not modify, disassemble or damage the product, the lever or safety lock system.
 Do not use GRE multiconnection for high pressure and high temperature application.
 Please refer to CS coupling datasheet & single GRE multiconnection datasheet.

TECHNICAL FEATURES AND OPTIONS

	Interchange Stucchi profile (only for Stucchi multicouplings)		Sealing description Nitrile NBR		Connection system By multicoupling
	Available sizes from 3/8" to 1/2"		Material Brass		Available threads BSP - NPT
	Operating pressure Up to 10 bar		Locking mechanism PIN/CAM		Flow rate Up to 90 l/min
	Temperature (°C) oil -20°/+100° water +5°/+60°		Valving style Flat face		Connection under pressure Connection: not allowed Disconnection: not allowed.

BENEFITS

- The solution to conduct low pressure hydraulic oil, pneumatic or water lines.
- Valving design helps to reduce the inclusion of contamination to the circuit.
- Minimal fluid loss during connection / disconnection, reducing fluid loss to the environment.
- Minimal air inclusion during connection / disconnection, enhancing correct function of the circuit.
- Linear flow reduces internal turbulence and pressure drop, maintaining circuit efficiency in the entire system.
- Good corrosion resistance thanks to brass components construction
- The modular design allows flexibility with the range of port configurations (hose barb available on request).
- Allows to conduct in the same multiconnection different fluids: hydraulic oil, water, air.
- Couplings are assembled with a seeger ring for a quicker mounting or service on the multiconnection.
- Compact slim design.
- Safe and simple to use.

HOW TO USE

- See instructions at page 156

MAIN APPLICATIONS

PERFORMANCE

Size		Series/Size	Max. flow suggested		Spillage*
Inch	mm (ISO)		l/min	GPM	ml
3/8	-	CS9	46	12.2	0.03
1/2	-	CS12	90	23.8	0.04

Size	Series/Size	Max. operating pressure						Burst pressure					
		Coupled		Male		Female		Coupled		Male		Female	
Inch		MPa	psi	MPa	psi	MPa	psi	MPa	psi	MPa	psi	MPa	psi
3/8	CS9	1	145	1	145	1	145	4	580	4	580	4	580
1/2	CS12	1	145	1	145	1	145	4	580	4	580	4	580

* Spillage is an indicative value of the fluid loss per couple-uncouple cycle.

Different possible configurations:

Other ports available upon request.

Different threads available upon request.

PL version, free flow (without valve) on both sides.

Temperature range:

Seals in NBR (Nitrile):

- for oil, from -20° C to +100° C (from -4° F to +212° F)

- for water, from +5° C + 60° C (from +41° F to +140° F)

Upon request seals in VITON®: from -15°C to +180°C (from +5 °F to +356 °F).

Tests:

The couplings have been tested in according with ISO norm.

! WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Do not use the female coupling disconnected with high impulse pressure.

Do not couple-uncouple with flow and/or pressure in the circuit.

Do not couple-uncouple when the temperature inside of the circuit is higher than 80 °C (176 °F).

Check the maximum allowable operating pressure of the port in use.

Make sure that the medium used is compatible with seal and material as indicated for each series.

In case of doubt please contact Stucchi Technical Support.

It is MANDATORY to read and closely follow the instructions. Last updated version always apply at time of installation, see latest written Instructions on Stucchi website (stucchigroup.com) before selecting or using Stucchi products.

Please read carefully General instructions for selection and use of the products in our master catalogues.

Do not couple-uncouple with flow and/or dynamic pressure in the circuit.

CS series is intended to be used only on Stucchi Multiconnections. Do not use the CS coupling on a Custom-made multiconnection or other device different than a Stucchi Multiconnection.

Do not disassemble, misuse, modify or damage the products.

CS series has been tested & approved with hydraulic oil. CS serie is intended to be used only with not dangerous fluids (water, hydraulic oil, air at low temperature/low pressure).

Do not use CS couplings with dangerous, inflammable or explosive fluids (steam, acids, very hot/flammable oils etc.).

Do not use CS couplings with very hot fluids (limits given by NBR seal compatibility & temperature range).

Do not use CS couplings with fluids below the freezing point to avoid damages due to ice expansion and consequential extrusion of the valving

DP Series

Complete lever set spare kit

Composed of:

Lever
spring
Pin
Knob
Seeger ring
Red button
Locking pin

How to replace it

Unscrew & disassemble the lever group from the fixed multiconnection, then disassemble the seeger ring to extract the knob. Reassemble the new kit with the same sequence vice-versa. Threads of the lever set have to be reassembled with Loctite (2701 Type) and screw the tread with proper torque.

Energized spring could come out from the button, be careful.

Pay attention to the button internal pin - it is pushed by a spring! Be careful.

GR Series

Complete lever set spare kit

Composed of:

Little multicoupling
Lever
Wedge
Pin
Seeger ring
Knob
Nut
Red button
Internal spring
Locking pin

How to replace it

Unscrew the lever group from the fixed multiconnection, then take away the little multicoupling. Reassemble the new kit with the same sequence vice-versa. Threads of the lever set have to be reassembled with Loctite (2701 Type) and screw the thread with proper torque.

Energized spring could come out from the button, be careful.

Pay attention to the button internal pin - it is pushed by a spring! Be careful.

GRE Series

Complete lever set spare kit

Composed of:

Lever

spring

Pin

Knob

Seeger ring

Red button

Locking pin

How to replace it

Unscrew the lever group from the mobile multiconnection, then take away the little multicoupling. Reassemble the new kit with the same sequence vice-versa. Threads of the lever set have to be reassembled with Loctite (2701 Type) and screw the thread with proper torque.

Energized spring could come out from the button, be careful.

Pay attention to the button internal pin - it is pushed by a spring! Be careful.

WARNING

Energized spring could come out from the button, be careful!

Here above instruction has to be considered as general indication how to replace spare kit on multicoupling, not a complete instruction of use. Please ask the specific instruction by contacting Stucchi Customer Service for support at info@stucchi.it

Notice: all the nut&threads of the lever set have to be reassembled with Loctite (2701 Type) before screwing. All the threads have to be screwed with proper torque value. The code of the lever spare kit is on the multicoupling datasheet

FIRG

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 2"
Operating pressure: Up to 330 bar
Flow rate: Up to 1000 l/min
Material / Treatment:
Carbon steel / Cr3

A

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 1/8" to 1-1/2"
Operating pressure: Up to 420 bar
Flow rate: Up to 750 l/min
Material / Treatment:
Carbon steel / Cr3

APM

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 3/8" to 1-1/2"
Operating pressure: Up to 350 bar
Flow rate: Up to 750 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure: One side only

A-HD

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 3/8" to 1/2"
Operating pressure: Up to 350 bar
Flow rate: Up to 90 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure: One side only

AX

Valving style: Flat face
Interchange: ISO 16028
Sealing description: FKM (Viton®)
Available sizes: From 1/4" to 1"
Operating pressure: Up to 350 bar
Flow rate: Up to 378 l/min
Material / Treatment:
Stainless steel (AISI 316L)

FIRG-Q

Valving style: Flat face
Interchange: ISO 16028
Sealing description:
Nitrile NBR-FKM(Viton®)-EPDM-Kalrez®
Available sizes: From 1/4" to 2"
Operating pressure: Up to 300 bar
Flow rate: Up to 1000 l/min
Material / Treatment:
Carbon steel+Stainless steel
(AISI 316L) / QPQ

FL

Valving style: Flat face
Interchange: ISO 16028
Sealing description: FKM (Viton®)
Available sizes: From 1/8" to 2"
Operating pressure: Up to 350 bar
Flow rate: Up to 1000 l/min
Material / Treatment:
Stainless steel (AISI 316L)

FLAT FACE SCREW

VEP-P

Valving style: Flat face
Interchange: Stucchi profile
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 2"
Operating pressure: Up to 600 bar
Flow rate: Up to 1000 l/min
Material / Treatment:
Carbon steel / Cr3+QPQ
Connection under pressure: Allowed

VEP-HD

Valving style: Flat face
Interchange: Stucchi profile
Sealing description: Nitrile NBR
Available sizes: From 5/8" to 1-1/2"
Operating pressure: Up to 550 bar
Flow rate: Up to 750 l/min
Material / Treatment:
Carbon steel / QPQ
Connection under pressure: Allowed

VP-P

Valving style: Flat face
Interchange: Stucchi profile
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1-1/2"
Operating pressure: Up to 600 bar
Flow rate: Up to 750 l/min
Material / Treatment:
Carbon steel / Cr3+QPQ
Connection under pressure: Allowed

CASTING

SATURN

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 1/2" to 3/4"
Operating pressure: Up to 350 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
One side only

SATURN HF

Valving style: Flat face
Interchange: ISO 16028
Sealing description: Nitrile NBR
Available sizes: From 1/2" to 3/4"
Operating pressure: Up to 350 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
One side only

POPPET SCREW

VD

Valving style: Poppet
Interchange: ISO 14541
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1-1/4"
Operating pressure: Up to 450 bar
Flow rate: Up to 378 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
One side only

VLS

Valving style: Poppet
Interchange: With similar couplings
Sealing description: Nitrile NBR
Available sizes: From 1/2" to 1"
Operating pressure: Up to 465 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
One side only

BOP

VOF

Valving style: Poppet
Interchange: With similar couplings
Sealing description: Nitrile NBR
Available sizes: From 3/4" to 2"
Operating pressure: Up to 345 bar
Flow rate: Up to 1100 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
One side only

BOP

VOFX

Valving style: Poppet
Interchange: With similar couplings
Sealing description: Nitrile NBR
Available sizes: From 3/4" to 2"
Operating pressure: Up to 207 bar
Flow rate: Up to 1100 l/min
Material / Treatment:
Stainless steel (AISI 316L)
Connection under pressure:
One side only

POPPET

VR

Valving style: Flat face non-spill
Interchange: With Rohrleitung couplings
Sealing description: Nitrile NBR
Available sizes: From 3/8" to 1-1/4"
Operating pressure: Up to 420 bar
Flow rate: Up to 576 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure: One side only

BIR

Valving style: Poppet
Interchange: ISO 7241 'A'
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 2"
Operating pressure: Up to 350 bar
Flow rate: Up to 1000 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
Allowed (only PC version)

I/IP

Valving style: Poppet
Interchange: ISO 7241 'A'
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1"
Operating pressure: Up to 350 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3

IR

Valving style: Ball
Interchange: With similar couplings
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1"
Operating pressure: Up to 300 bar
Flow rate: Up to 150 l/min
Material / Treatment:
Carbon steel / Cr3

IR-V

Valving style: Poppet
Interchange:
With similar couplings
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1"
Operating pressure: Up to 300 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3

IRB

Valving style: Poppet
Interchange: ISO 7241 'B'
Sealing description: Nitrile NBR
Available sizes: From 1/8" to 1"
Operating pressure: Up to 350 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Carbon steel / Cr3

IRBO

Valving style: Poppet
Interchange: ISO 7241 'B'
Sealing description: FKM (Viton®)
Available sizes: From 1/8" to 1"
Operating pressure: Up to 200 bar
Flow rate: Up to 200 l/min
Material / Treatment: Brass

IRBX

Valving style: Poppet
Interchange: ISO 7241 'B'
Sealing description: FKM (Viton®)
Available sizes: From 1/8" to 1"
Operating pressure: Up to 250 bar
Flow rate: Up to 200 l/min
Material / Treatment:
Stainless steel & brass

BOP

IRC

Valving style: Poppet
Interchange: Nordic interface
Sealing description: Nitrile NBR
Available sizes: From 1/4" to 1"
Operating pressure: Up to 450 bar
Flow rate: Up to 378 l/min
Material / Treatment:
Carbon steel / Cr3
Connection under pressure:
Allowed (only PC version)

IRCX

Valving style: Poppet
Interchange: Nordic interface
Sealing description: FKM (Viton®)
Available sizes: From 1/4" to 1"
Operating pressure: Up to 300 bar
Flow rate: Up to 378 l/min
Material / Treatment:
Stainless steel (AISI 316L)

IFR

Valving style: Flat face non-spill
Interchange: ISO 5676
Sealing description: Nitrile NBR
Available sizes: 3/8"
Operating pressure: Up to 150 bar
Flow rate: Up to 46 l/min
Material / Treatment:
Carbon steel / Cr3

HIGH PRESSURE

A-HP

Valving style: Flat Face
 Interchange: Stucchi profile
 Sealing description: Nitrile NBR
 Available sizes: From 1/8" to 3/8"
 Operating pressure: Up to 720 bar
 Flow rate: Up to 46 l/min
 Material / Treatment:
 Carbon steel / Cr3

IV-HP

Valving style: Ball
 Interchange: With similar couplings (high pressure)
 Sealing description: Nitrile NBR
 Available sizes: From 1/4" to 3/8"
 Operating pressure: Up to 700 bar
 Flow rate: Up to 23 l/min
 Material / Treatment:
 Carbon steel / Cr3

CHECK VALVE

VUZ

Available sizes: From 1/8" to 2"
 Operating pressure: Up to 400 bar
 Flow rate: Up to 1000 l/min
 Material / Treatment:
 Carbon steel / Cr3

VEHICLE A/C

ACR-ACB

Valving style: Poppet
 Interchange: SAE J639
 Sealing description: HNBR
 Available sizes: 1/4"
 Operating pressure: Up to 41 bar
 Material / Treatment: Brass

Easy Connection Under Pressure is the Stucchi solution for manual connection with residual pressure in the circuit. The male couplings have a triple valve system that allows the easy connection of couplings with internal residual pressure, in safe condition and without fluid loss.

Blow Out Prevention
 Specific dimensions are fire tested and Lloyd certified in accordance with API 16D and the EUB Directive #36. For complete technical information please contact Stucchi technical support.

The incorrect use of products can cause malfunctioning and safety risks.

Therefore, before using Stucchi products, we strongly recommend reading and following the “general instructions for selection and use of the products” and the “instructions of use” of the specified product intending to use.

WARNING

A defect, a wrong choice or an improper use of products, can cause injury to persons, animals and objects.
Connection under pressure as under residual pressure.

Never connect or disconnect with dynamic pressure (e.g. pump on).

Make sure that the medium used is compatible with seal and material as indicated for each series.

The interchangeability is mentioned under the assumption that the manufacturer of the considered products has not changed any dimension.

It is mandatory to carefully read and closely follow the instructions before selecting or using any Stucchi products.

Always refer to the version uploaded in the Instructions and warnings section of stucchigroup.com website for the latest release.

In case of doubt or for specific product-related instructions, please contact Stucchi technical service.

1.0 GENERAL INSTRUCTIONS

1.1 Context

These safety instructions form a supplement and shall be used as one document together with the technical documentation related to the specified product to be installed.

1.2 Safeguarding

It is recommended that all systems and equipment be protected so that safety of people, animals and objects will be guaranteed in case of defect of the product.

1.3 Distribution of the instruction

A copy of these instructions has to be supplied to every person responsible for the selection and/or usage of the products.

1.4 Responsibility of the user

Due to the most various range of operating use and conditions of the products, Stucchi does not guarantee that every product can be used for every application.
These safety instructions don't analyse all technical parameters that have to be considered by selecting the products.

The end user, through their own analyses and tests, is responsible for the following:

- Final selection of the product
- Ascertainment that the requirements of the end user are satisfied and that the predicted use does not present a safety risk.
- Supply of all warnings regarding the safety of the equipment on which Stucchi products will be used.
- Correct disposal of the product at the end of its life, see paragraph 'disposal instructions'.

2.0 INSTRUCTIONS FOR SELECTION OF THE PRODUCT

2.1 Application fields

Check that the product is suitable for the specific application.
In case of doubt, contact the Stucchi Technical Support.

2.2 Type of product

Select the type of product most suitable for the working environment.

Flat face couplings: suitable for working environments where it is necessary to reduce to minimum the fluid loss during disconnection and to avoid dirt inclusion during connection.
Screw couplings: they are suitable for high operating pressure and frequent impulses; they are connectable with high residual pressure.

Poppet valve couplings: widely used in the agricultural field.

2.3 Materials and treatments

Make sure that the materials and treatments of the product conform to the exposed working environment.

2.4 Dimensions

Choose the product with dimensions and flow suited to the circuit in order to avoid over stress damaging the product.

2.5 Flow inversion

For application with flow inversion during operation, use only products designed for that scope.

Flow inversion during operation generates turbulences inside the product that can cause damage on the components.

2.6 Thread

Choose the product with thread suitable for the application.

For high pressure conditions, over 50 MPa, products with taper thread NPT are recommended.

2.7 Type of medium

Verify that the seals of the product are compatible with the medium used in case of doubts please contact Stucchi Technical Support.

Make sure that other not compatible fluids do not come in contact with the seals in case of maintenance. Do not use the products with inflammable, explosive or dangerous fluids without approval of Stucchi.

2.8 Medium temperature

Verify that the working temperature is within the functional limits of the coupling and its seals. The couplings must not be connected and disconnected with a temperature higher than 80 degrees Celsius. In case of connection-disconnection with temperature higher than 30 Celsius degrees, the operator must be protected using gloves and/or other devices to prevent any leakage or splashing causing injury to himself, persons, animals and objects.

2.9 Environment temperature

With extreme temperature conditions, the mechanical resistance of the products changes. The use and handling of couplings in case of ice can be difficult due to ice inclusion in the blocking mechanisms.

Use protective gloves in applications with hot and cold operating temperature.

2.10 Pressure

Verify always if the maximum operating pressure of the product is the same or higher than the pressure peaks of the application.

Do not make confusion between the burst pressure and the maximum operating pressure, so do not use the value of the burst pressure for your selection.

Check that the number of impulse cycles which the product has been tested is compatible with the impulse number of the application.

2.11 Residual pressure

For connection and disconnection with residual pressure use only couplings that are developed for this scope.

The term 'internal residual pressure' means: the static pressure retained in the system, which has not been generated by a working pump or other accessories in movement.

The structure of the machine or plant in which these products are placed, must be suitable to limit accidental splashing and fluid losses caused by wrong usage or malfunctioning of the product, in order to avoid direct and indirect damage on persons, animals or objects. The temperature of the fluid must not exceed the limits mentioned in point 2.8

2.12 Connection frequency

It is important to know the connection frequency with which the coupling is used, while this has significant influence on the life of both springs and seals.

An under-estimated value can cause unexpected fluid loss.

2.13 Safety device

If used in environments or machines in strict closeness at persons, animals or objects (1 meter), within easy accidental disconnection conditions, it is highly recommended to use ball locked couplings with security system or screw couplings and to make sure that the preventive disconnection mechanism is correctly screwed together.

2.14 Mechanical loads

Side loads, mechanical stresses in general and vibrations reduce significantly the life of the product and are often the cause of sudden damages.

It is recommended to assemble quick release couplings without risks of mechanical damage and over-loading caused by stress generated in flexible or rigid hoses and to assemble quick release couplings on hoses with proper dimensions referred to the nominal passage of the quick release coupling.

2.15 Rotation

In case of applications with rotation use only products developed for this scope.

In case of rotation between male and female part it is necessary to inform in advance Stucchi Technical Support or to provide the connection with swivel joints suitable for this scope.

2.16 Special applications

You should be advised to take particular attention to special applications (such as vacuum use, high temperature, etc...).

Please consult Stucchi Technical Support who is able to give instructions concerning the use of Stucchi products.

Do not use Stucchi products in nuclear, aircraft or military field; do not use Stucchi products in explosive environment or with inflammable, explosive or dangerous fluid. In this cases contact Stucchi Technical Support for assistance.

3.0 INSTRUCTIONS FOR STOCK PRESERVATION

For a correct preservation of the product and in order to avoid damage before even starting to use the product read carefully the following instructions.

3.1 Packaging

The products have to be kept in closed packaging to protect the components, mainly the seals, from dust and ultraviolet rays.

3.2 Environments

The products shall be kept in environments with low percentage of humidity, no condensation, no salt, protected from atmospheric factors, far away from heating devices and magnetic fields. Eliminate equipment that can produce ozone, as this element is extremely destructive for the seals.

3.3 Protection cap

The protection cap assembled on the thread has to be removed at the moment of the product installation only.

3.4 Special packaging

In case of requests for special packaging contact the customer service.

4.0 INSTALLATION INSTRUCTIONS

4.1 Pre Installation inspections

Before installation of the product it is necessary to inspect it visually and to verify if the part number and description of the product refers to the one requested.

4.2 Hose size

The optimal is to use the hoses having the same sizes as the coupling body, can be used the hoses having one size more (step up) than the coupling but not bigger otherwise they can overstress the coupling with risk of failure.

4.3 Hose assembling

In case of single coupling one part (female or male) can be assembled directly on the rigid tube, but the other part shall be assembled on the flexible hose in order to allow an easy connection and absorb better the vibration and mechanical stress. In case of the multicoupling both parts (fixed and mobile) shall be assembled on the flexible hoses to avoid the misalignment of the couplings. Once connected the flexible hose should create a right radius according to the hose manufacturer specifications, in this way the connection/disconnection of the couplings takes place in easy way and aligned position.

4.4 Side load

Don't apply radial/axial loads that create misalignment of the couplings during connection/disconnection and can cause damage on the connection and sealing parts.

4.5 Fitting assembling

Use fittings and sealing systems conform to the thread of the product only. To install and remove the couplings use proper tools and act only on flat spanner surfaces of the coupling. Do not use improper tools (spanner for hoses, bench vice, pincer etc.) while these can cause damage on the coupling with malfunction as result. Use the tightening torque stabilized by the norm to screw the fittings.

4.6 Positioning of the coupling

It is suggested to install the couplings in such way that they can easily be connected and disconnected, reducing to the minimum the forces and risks for the operator. It's suggested to install the coupling not exposed in order to protect it from collision with other parts. It is suggested to protect the couplings using shelters and protections (see sector norms) to guarantee the security and to prevent damage.

5.0 INSTRUCTIONS OF USE

5.1 Modality of use

The modality of use changes in accordance to the type of product used.

For every type of product, the modality of use described in the catalogue or the specific usage instructions supplied by Stucchi have to be carefully followed. The system has to be immediately stopped and the product should be replaced whenever one of the following conditions will occur:

- Visible damage, damaged parts of the product, cracks and corrosion.
- Difficulties in connection and disconnection generated by too high force compared to the data mentioned in the catalogue.
- Presence of leakage.
- Malfunctioning of the valve.

In the above mentioned cases please contact Stucchi Technical Support for information.

5.2 Connection / Disconnection

Before connecting, the parts of the couplings involved in the connection have to be cleaned. Connection with dirty parts may cause damage such as unexpected and dangerous leakage on the coupling. Another consequence of dirt is contamination of the system. Do not connect and disconnect the coupling only as indicated in the modality of use: do not use other unsuitable tools. A loss of fluid contained in the circuit may occur during the disconnection of the coupling. The approximate spillage values are shown in the catalog. It is recommended to pay maximum attention during the disconnection phase and to activate the necessary precautions to avoid the dispersion of fluids in the environment.

5.3 Mechanical damage

The product shall not be exposed to mechanical damages while they can cause damage and malfunctioning. Do not use tools to open the valves to release residual pressure trapped in the circuit.

5.4 Circuits cleaning

Use the products in clean circuits. Dirt can damage components of the product and cause malfunctioning.

5.5 Protection caps

Use anti-dust caps when coupling is disconnected to avoid dirt and contamination and to protect the surface from accidental damage caused by collisions.

5.6 Use of semi-couplings of other manufacturers.

Do not connect Stucchi half-couplings with other not compatible half-couplings. In case of connection of a Stucchi half-coupling with a half-coupling from another manufacturer, do not exceed the lowest nominal pressure of the two products.

6.0 MAINTENANCE INSTRUCTIONS

The good functional of product is often compromised by a lack of maintenance. To avoid unexpected damage that can cause times of arrest and safety risks it is necessary to apply maintenance periodically.

The period dedicated to the maintenance of the product has to be defined by the user and depends on the type of application and on the working conditions the product is exposed to.

6.1 Ordinary - Preventive maintenance

First, the product should be well cleaned and the area where it is installed as well, then you should check and verify the following steps:

- Absence of breakage or various damage on the products.
- Absence of leakage in general.
- Correctness of tightening torque of the adapters.
- Check the level of circuit contamination.
- The connected parts or the parts in movement should be greased with grease compatible with the seals assembled in the products.
- The replacement of the coupling should be planned in accordance with the requested endurance for the specific application.

6.2 Repair

In case of repair of the products it is recommended to follow Stucchi's specific instructions and use spare parts, tools and documentation supplied by Stucchi only. Please contact Stucchi Technical Support for the above specific information.

7.0 Disposal instructions

Do not litter the product after use. The product must be disposed according to the local law and the requirements of the relevant local authorities. Details about product composition are reported in the catalogs on stucchigroup.com. The user is responsible for the waste characterization and its disposal.

IT IS THE RESPONSIBILITY OF THE USER TO SELECT, INSTALL AND USE THE QUICK RELEASE COUPLING IN THE CORRECT WAY.

The texts, data and illustrations indicated in this catalogue, may be changed by Stucchi S.p.A at any time without notice. For more information please contact the Stucchi Technical Support, in any case we remind for **last updated version always applied at time of installation, see latest written instruction on stucchigroup.com before selecting or using Stucchi products.**

SEAL Temperature range

It is a generic indication of the seal temperature range given by Stucchi seal suppliers after laboratory tests made in standard conditions. It is given for Customer information only (is intended as a guide but not as a warranty). It does not mean all the Stucchi products are homologated for such seal temperature range. Fluid in use, external condition (radiant heating, temperature changes...), internal condition (duration of exposure, state changes of the fluid, thermal expansion...) should be taken into account. Every application has to be analyzed by the Customer prior to do the final choice. Please contact us for further information.

SEAL compatibility

Verify that the seals of the product are compatible with the medium used. Make sure that no other not compatible fluids do not come in contact with the seals in case of maintenance or due to external environment condition. Do not use Stucchi product with flammable, explosive or dangerous fluids. We always recommend to do a customer verification & validation test to approve the products in the specific application prior to do the final choice. Please contact us for further information.

Body size (Inch)	ISO size	Dash size
1/8	(4)	-2
1/4	6.3	-4

Quick Coupling Glossary

Brinelling

Markings of the locking balls on the metallic parts where they are in contact with high impulse applications.

Burst pressure

Value of pressure at which a coupling loses its ability to retain pressure.

Dis/Connect force

Value of force required to dis/connect the couplings without residual pressure in the system.

Connect torque

Value of torque required to connect the couplings without residual pressure in the system.

Coupled

Male coupling half connected with the female coupling half.

Disconnect torque

Value of torque required to disconnect the couplings without residual pressure in the system.

Interchangeability

Possibility of male coupling half or female coupling half to connect with the other brands of couplings.

ISO Size

Size indicated by ISO standard (the International Organization for Standardization) related to interchangeability of the couplings.

ISO Norm

The norms used as reference for the test method are two: ISO 7241-2 issued in 1986 then canceled and replaced in 2017 by the new ISO 18869.

Mechanical connection

Method or type of connection that creates retention between the male coupling half and female coupling half.

Max. flow suggested

Max. flow suggested by Stucchi

Max. operating pressure

The maximum peak of pressure at which can be used the product.

Max. residual pressure during connection

Max. allowed residual pressure (pressure trapped in the circuit) to connect the coupler.

Max. residual pressure during disconnection

Max. allowed residual pressure (pressure trapped in the circuit) to disconnect the coupler.

Pressure drop

Pressure lost between the inlet and the outlet of the coupling.

Quick coupling

A quick, easy, sure product to repeatedly connect and disconnect almost any fluid line in a system and to turn off the flow immediately upon disconnect.

Rated flow

Typical rated flow relative to the size, in accordance with ISO norm standard.

Size

Nominal size of coupling body.

Spillage

Indicative value of the fluid loss per couple - uncouple cycle without residual pressure. Checked on sample in accordance with ISO norm test method.

Temperature range

See page 190.

Tightening torque

Recommended torque to apply during connection on screw to connect couplings to prevent accidental disconnection.

Valve system

Type of valve used to shut-off medium flow in the male or female coupling half once disconnected.
